Child Development and Learning Susanne Garvis, Sivanes Phillipson, Sharryn Clarke, Linda Harrison, Jane McCormack, Donna Pendergast, 2018-09-17 Child Development and Learning integrates concepts of learning and development into one comprehensive text for understanding child development. At its core is the belief that learning and development are intertwined. As children learn, they also develop. As children develop, they also learn. With an understanding of how children develop, specific activities can be implemented to support the learning of all children. The text explores both classical and emerging theories and assists pre-service teachers to grasp the details of the historical references to current understandings of development. The intention is to highlight the importance of understanding how child development theories can be implemented within the field of education. With its clear and engaging style, the text presents up-to-date research while offering practical applications that will relate to pre-service teachers' personal and professional lives. Child Development and Learning is comprised of six sections. Five of the sections cover the developmental domains, and within each domain there are four chapters based on chronological age, from birth to 18 years. Each section consists of activities to foster engagement by allowing the reader to learn through critical reflection and analysis. The final sixth section provides an overview of how to plan for schooling starting with early childhood education and ending with senior schooling, and draws together the learning techniques necessary to support children within different age ranges. Complete with examples that are research-focused, real-world and cross-cultural, students are provided with practical strategies to help them program and plan for learning and development.

Specifically, it has been written to act as a resource for instructors who have adopted the McDevitt and Ormrod text for use in courses that deal with child development, educational psychology, or similar disciplines. More specifically, it has been written to help students in teacher preparation and other professional programs make connections between what they learn in their child development classes and what theories and principles look like in practice through the medium of children's literature.

Learning from the Inside-Out Manya Whitaker, 2016-09-29 *Learning from the Inside-Out: Child Development and School Choice* is the first book of its kind to marry child development, educational psychology, neuroscience, and pedagogy. This book goes beyond the now banal conversation of differentiating students based upon gender, race, and class. This book is about the cognitive and social needs of students throughout the developmental span and how to identify schools that meet those needs. In essence, this book rejects the one-size-fits-all discourse of education reform in favor of a focus on individualized educational decision-making. *Learning from the Inside-Out* acknowledges that contrary to the popular saying, good teaching is not good teaching. What one student needs in a teacher, classroom environment or curricula is not necessarily what another student might need despite demographic similarities. After reading this book, parents and teachers will be empowered and informed when making decisions about how best to educate children.

Child Development Daevion McClain, 2019-11-07 The study of child development is of immense importance to those dealing with children, either as parents or teachers. Starting from the prenatal embryonic stage, the book traces the development of a child not only in physical field but in intellectual (cognitive), emotional (co-native), social and moral fields too, as they all make the important aspects of a child's personality. Besides, the role of nature and nurture has been highlighted since the prenatal stage to that of adolescence. Child development refers to the sequence of physical, language, thought and emotional changes that occur in a child from birth to the beginning of adulthood. During this process a child progresses from dependency on their parents/guardians to increasing independence. Child development is strongly influenced by genetic factors (genes passed on from their parents) and events during prenatal life. It is also influenced by environmental facts and the child's learning capacity. Child development can be actively enhanced through targeted therapeutic intervention and the 'just right' home based practice, recommended by Occupational Therapists and Speech Therapists. Child development refers to the biological and psychological changes that occur in human beings between birth and the end of adolescence, as the individual progresses from dependency to increasing autonomy. Because these developmental changes may be strongly influenced by genetic factors and events during prenatal He, genetics and prenatal development are usually included as part of. The study of child development. This book is intended to ease the task faced by researchers, instructors, and students who are confronted by the vast amount of research and theoretical discussion in child development and behaviour.
